General info

Note sulle finiture
Information on the goods' finishing

Il vetro soffiato è la risultante di una lavorazione artigianale e non industriale e seriale. Ogni oggetto, per quanta attenzione possa mettere il maestro vetraio, sarà diverso l'uno dall'altro, sia in termini di dimensione che di forma e finitura. Questa diversità rende ogni oggetto creato dai mastri vetrai, unico ed esclusivo. Ogni imperfezione, quindi, sia essa in termini di forma, dimensione o finitura, non costituisce certo difetto, ma una caratteristica tipica del lavoro manuale.

Blown glass is the result of an artisanal process. It is a hand-made product that does not involve any industrial or mass production process. Despite the abilities of the artisan, every glass will be different from the other in terms of size, shape and finish. Every glass blown by the "Mastro vetraio" (master of glass) is unique and special. No imperfection, in terms of size, shape and finish, is a defect, but rather the distinguishing feature of a hand-made product.

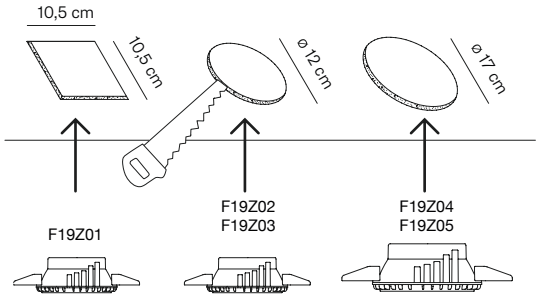
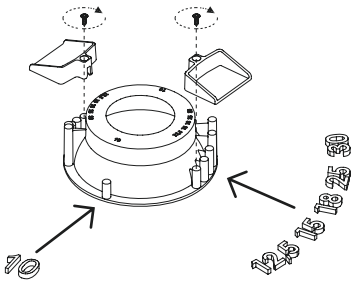
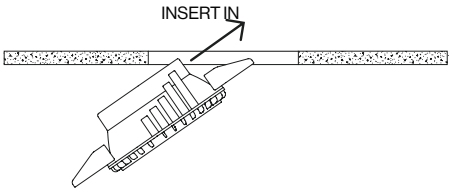
1. Determine the size of the hole to be made in the plasterboard, depending on the type of formwork.



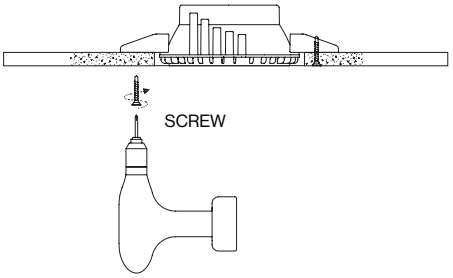
2. The formwork is supplied ready for a plasterboard thickness of 12,5mm. For other thicknesses, move the tabs.



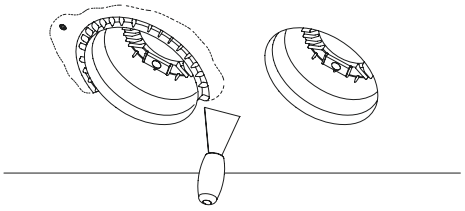
3. Fit the formwork inside the plasterboard and position it over the hole.



4. Where the tabs are, fasten the formwork to the plasterboard using the screws provided in the pack.



5. Perfectly plaster the edges of the formwork so the ceiling finish is uniform with the inside of the formwork.



6. In the basic version, fit the light bulb directly on the formwork using the round spring provided in the pack. In other cases, connect the lamp holder with light bulb to the power supply and fasten the whole to the formwork magnets.

Functional insulation in every part and ground terminal or clamp in the unit is fixed, or with conductor and relative plug with ground contact if the unit is mobile.

Class II
Doppio isolamento e/o isolamento rinforzato in ogni parte e senza dispositivo di messa a terra.
Double insulation and/or reinforced insulation in every part and without ground devices.

Class III
Apparecchio in cui la protezione contro la scossa elettrica si basa sull'alimentazione a bassissima tensione di sicurezza e in cui non si producono tensioni superiori alla stessa.
Appliance in which protection against electrical shock is guaranteed by the extremely low-voltage power supply and which does not produce higher voltages.
